Strategy (2019)

Background

ACI is now leading Smart Security.

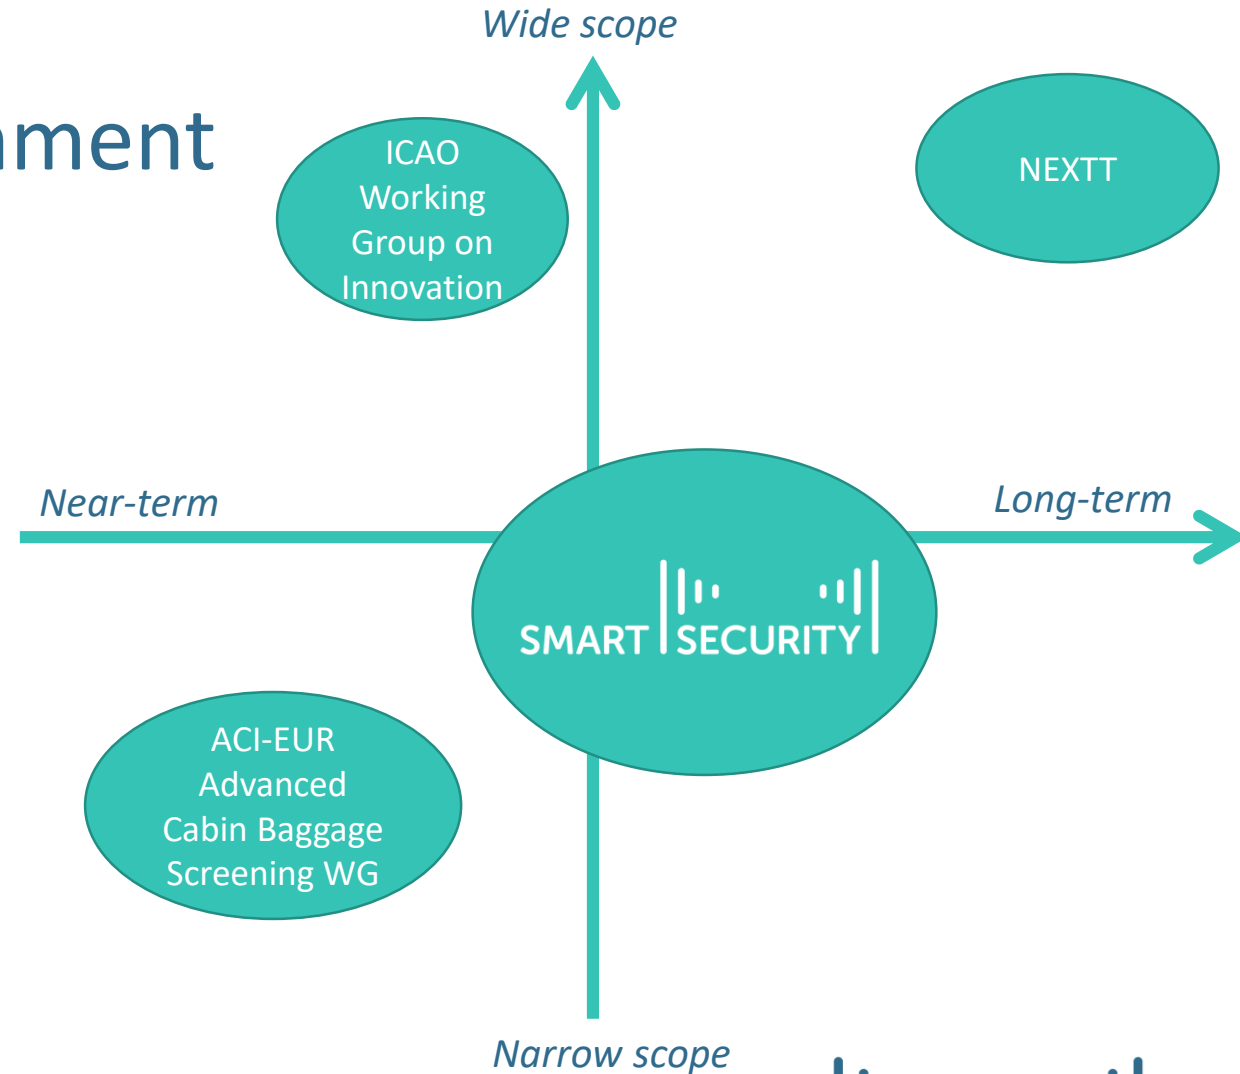

- In the last 5 years, Smart Security has been successful in identifying innovative solutions, compiling and communicating best practices, and driving change in the industry.
- At the November 2018 SSMG meeting, it was decided that the group needed to develop a statement of purpose and value proposition for Smart Security and the SSMG.
- In November it was announced that IATA would no longer be a co-sponsor of Smart Security and on 1 January 2019, ACI took the lead.

External Factors

Smart Security's Environment

- Aviation environment: fast traffic growth is putting pressure on airports
- Airport environment: variety of operating models, different capabilities to introduce advanced innovation
- Threat environment: continuously evolving threats, some of which require immediate response
- AVSEC community environment: other groups also focus on aviation screening innovation, but with different scopes, feasibility mindsets and timelines:

Way forward

To leverage its strengths and environment, the strategic review is based on the following principles:

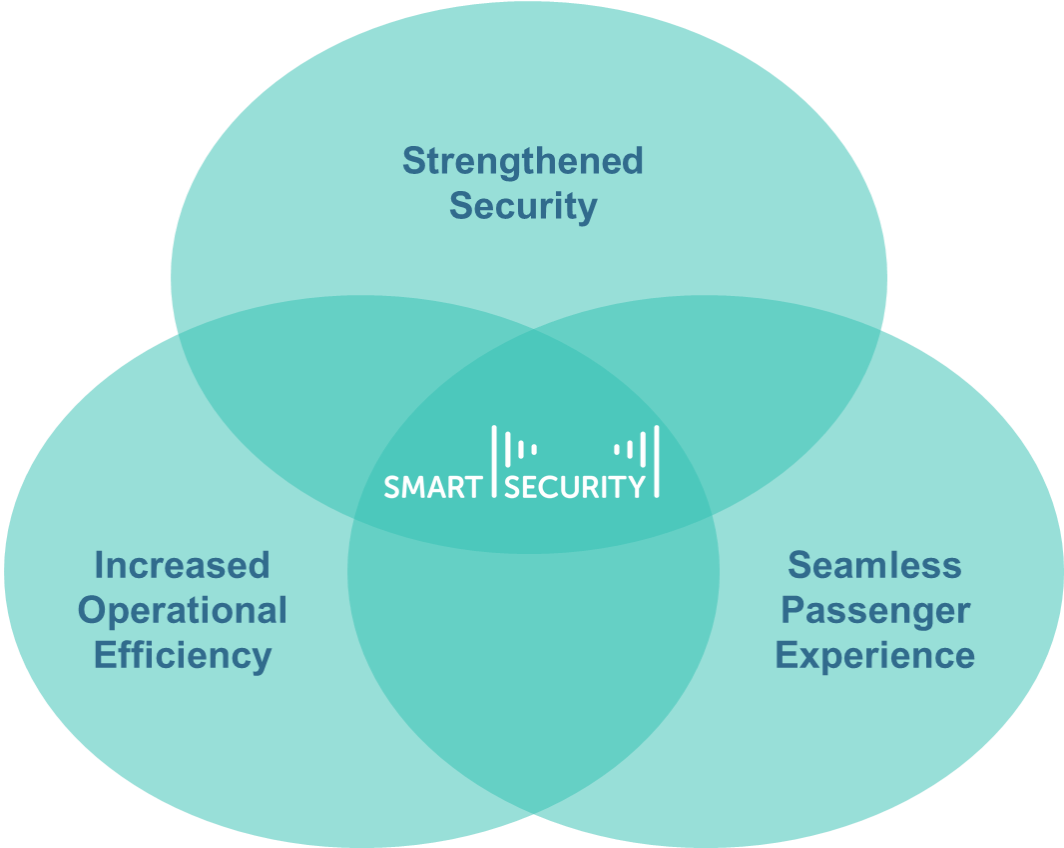

- 1 • Continue to focus on passenger and cabin baggage screening (not limited to checkpoint)
- 2 • Continue to update existing guidance and develop shorter Information Papers
- 3 • Further develop long-term vision of screening and differentiation concepts
- 4 • Leverage other groups' strengths where appropriate
- 5 • Leverage ACI membership to share best practices; develop innovation best practices for smaller airports

Smart Security Program Objectives

Smart Security is an initiative of Airports Council International (ACI) in collaboration with airports, airlines and governmental agencies.

Its main objective is to create a step change in passenger and cabin baggage screening, driving innovation in the face of ever-growing passenger numbers, escalating security costs and constantly evolving threats.

This will lead to increased operational efficiency, improved passenger experience and enhanced security.

Smart Security envisions a future where passengers are screened seamlessly, where security is strengthened and where airport facilities and operations are optimized

We will achieve this by:

Pillars	<p>1. Defining the future of passenger and cabin baggage screening which includes:</p> <ul style="list-style-type: none"> • Ideation and future state • Researching advanced technologies / processes and encouraging R&D <ul style="list-style-type: none"> • Focus on sustainability • Identification of regulatory impacts 	<p>2. Identifying near-term solutions and wider applications which includes:</p> <ul style="list-style-type: none"> • Advanced screening technologies <ul style="list-style-type: none"> • Process innovations • Risk-based concepts including differentiation • Low-tech, low-cost solutions that can apply to all airports 	<p>3. Promoting Smart Security concepts and solutions to a wide audience which includes:</p> <ul style="list-style-type: none"> • Sharing guidance • Communicating on successes and lessons learned <ul style="list-style-type: none"> • Assessments • Collaborating with regulatory bodies • Maintaining Smart Security brand

---------	--	---	---

SSMG Value Proposition

The SSMG is unique because:

- It is a small internationally-represented group of airports, airlines and government organizations.
- It is cutting-edge, agile and unconstrained.
- It is focused exclusively on passenger and cabin baggage screening.
- Members tend to be early adopters and enablers of new technologies and processes and are therefore well-positioned to provide guidance and share lessons learned.

This is just the beginning.
Work with us to deliver the future.
